Assessment Frontend Developer

Assignment
Build a simple Rating & Review form and display component

- Rate and write a review for a product
- Show the average rating
- List all the reviews for a product

The component is able to handle the full ratings & review creation and display process. All data is kept client-side in pagescope. There's no server side integration.
An Rating & Review entry has a score, an author, a creation date and a review.

Requirements
- The component is fully HTML, CSS and Javascript
- The Javascript code is build around modern frameworks like AngularJs and React
- The project uses dependency management, unit tests and CSS preprocessor.
- The CSS is basic but clean.

Presentation
- Demonstrate the Ratings & review component and explain your approach in a presentation of around 20 minutes.

The assignment explicitly leaves room for personal interpretation.
